

### Important Things to Remember

1. Always use a **metal tape measure**, a cloth tape measure will not be accurate
2. We require all of your measurements in **millimetres**
3. Measure **width then drop** in this order, try not to get these mixed up
4. Measure every window, there might be slight variations even if they are duplicate windows and this could affect your window furnishings fitting perfectly
5. Do not take your measurements from house plans as they are not accurate
6. If measuring with a partner, make sure the measurements are repeated out loud as they are written down
7. Double, and triple check all details are correct before ordering and **remember not to deduct anything off any Recess Fit measurements** as our factory will do this to ensure a perfect fit

These are not the measuring instructions, you can find those printouts and instructions on the measuring page under each product section.
